5

CONVERSATIONAL INTERFACES

MUNDO FÍSICO

- Veículos sem condutor
- Impressão 3D
- Robótica avançada
- Ciência de novos materiais

SÉCULO XXI As IDEIAS QUE PODEM MUDAR O MUNDO

MUNDO DIGITAL

- Inteligência Artificial
- As Máquinas que aprendem
- A Internet das coisas
- O poder dos sensores

O MUNDO BIOLÓGICO

- A sequenciação do Genoma
- A Edição Genética e a Terapia
- A Técnica CRISPR
- A luta contra as doenças
- A Medicina com assistentes virtuais (robots)

2019

POPULATION

7.5 billion people

GDP

85 trillion US\$

CAR FLEET

1 billion cars

OIL USE in DEVELOPED WORLD

14 barrels/person/year

OIL USE in DEVELOPING WORLD

3 barrels/person/year

WORLD ENERGY MATRIX

- . Oil Production is 5 times greater than in 1957
- . Renewables have established a more secure foundation
- . Oil/Coal /Natural Gas provide 80% of supply

ELECTRICITY

1,5 billion people without access

WATER

700 million people with scarce resources

2030

POPULATION

8,5 billion people

GDP

130 trillion US

CAR FLEET

3 billion cars

OIL USE

Billions of people with better incomes go from 3 barrels/person/year up to 3 or 4 times more

WORLD ENERGY MATRIX

- . Dominance of Natural Gas?
- . Consolidation of Renewables
- . Solution for the transport system: (electric/biofuels/GTL/fuel-cells)?

ELECTRICITY

- . Reduction or not of inequality?

WATER

- . Reduction or not water access?

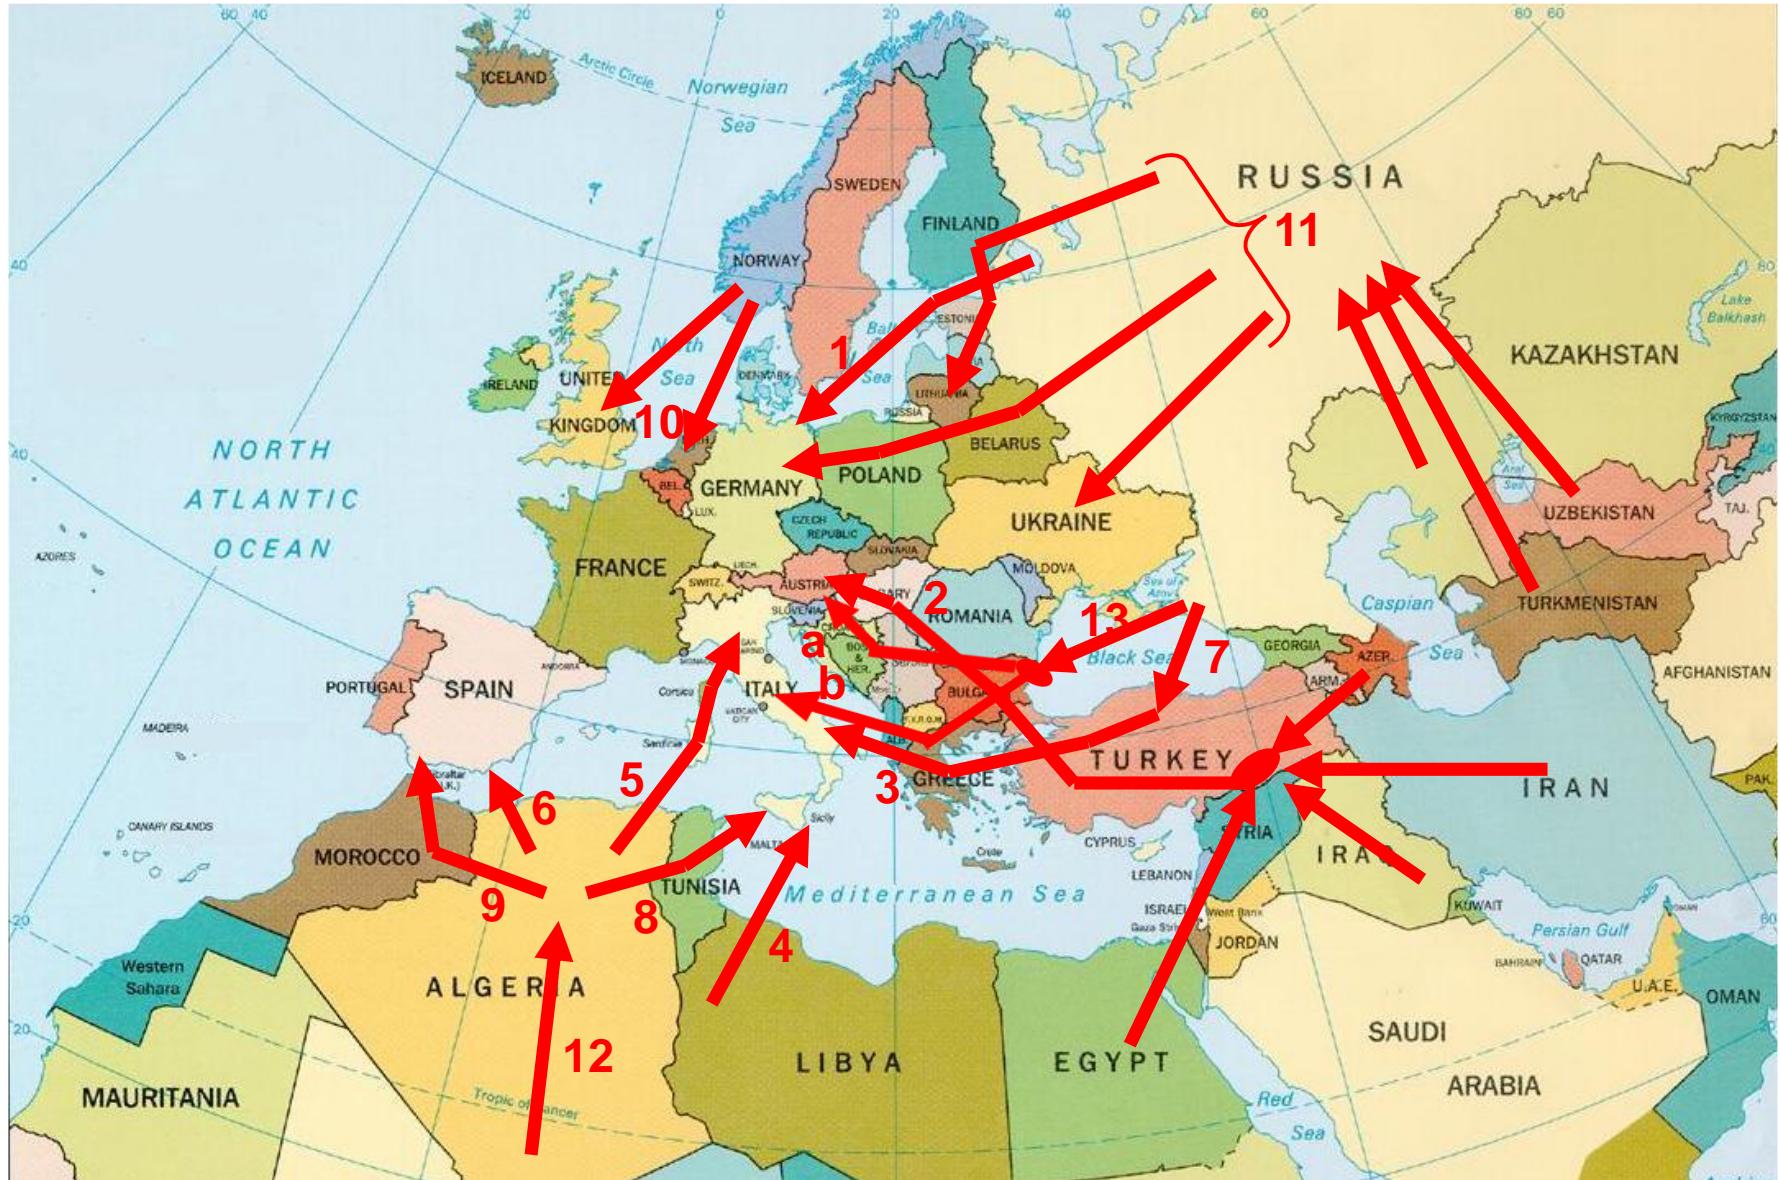

PRODUCTION of SELECTED COMMODITIES, 1950, 1975, and 2000

(in thousand metric tons, unless otherwise noted)

	PRODUCTION			PERCENT INCREASE 1950 - 2000
	1950	1975	2000	
Bauxite	8,370	25,401	135,000	1,513
Cobalt	7	30	33	371
Copper	2,645	6,960	13,200	399
Iron ore	250,000	887,389	1,061,148	324
Nickel	146	787	1,250	756
Titanium	814	3,298	5,187	537
Crude oil (billion barrels)	3,8	19,5	27,3	618
Natural gas (tillion cubic feet)	7,2	55,8	85,1	1,082

THE GEOPOLITICS OF THE PIPELINES

Conferência da AGN

António Costa Silva – Presidente da Comissão Executiva

SEGURANÇA do ABASTECIMENTO

- PORTUGAL: 45% gás Argélia
55% gás Nigéria
- Pipelines do Magrebe
- Instabilidade política MENA
- Dependência Energética do exterior 72%
- Europa: dependência da Rússia
- Papel da fachada Atlântica
- Segurança fluxos (pirataria)
- Cooperação geopolítica

SEGURANÇA ENERGÉTICA

SUSTENTABILIDADE AMBIENTAL

- Aposta nos recursos endógenos
- Mudança paradigma: do lixo para os recursos
- Economia Circular:
design/reciclagem/produtos
- Papel das Energias Renováveis
- Controlo e declínio emissões CO₂
- COP 21 e mudança climática
- Ligação aos mecanismos do mercado (caso carvão exportado dos EUA para a Europa)

ESTABILIDADE e COMPETITIVIDADE dos PREÇOS

- Falhas Mercado Único Europeu de Energia
- Falhas liberalização /regulação dos mercados
- Fraquezas das Redes Europeias Energia (pipelines + redes eléctricas)
- Políticas Públicas desligadas dos mecanismos económicos do mercado

PORtugal: ECONOMIA ATLÂNTICA no CRUZAMENTO das REDES da GLOBALIZAÇÃO

- Modelo Estratégico de Desenvolvimento
- Novo “mind set”
- Planeamento Estratégico

PORtugal: PONTE GEOPOLÍTICA entre EUROPA, EUA, Ibero-América, África Norte, Lusofonia, Atlântico Sul e Ásias

- TTIP
- CPLP
- Mercosul
- Repensar as Alianças

PORtugal CONECTADO GLOBALMENTE

- Portos
- Plataformas Logísticas
- Redes Comerciais
- Redes Energéticas
- Cadeias de Valor
- Porto de Gotemburgo/Suécia: ligado a 26 plataformas logísticas

OS FUTUROS POSSÍVEIS DE PORTUGAL

PORtugal: PLATAFORMA TECNOLÓGICA INTEGRADA

- Teste soluções tecnológicas
- Paradigma das cidades
- Atracção Investimento
- Alianças com países e Multinacionais

PORtugal: ESPAÇO GEOECONÓMICO INTEGRADO

- A geografia além da identidade territorial
- A ZEE
- Novos sectores económicos:
 - Recursos Marinhos
 - Biotecnologias
 - Ciências da Saúde
 - Indústria Alimentar
 - Indústria Farmacêutica
 - Indústria Cosmética
 - Energias Renováveis

PORtugal: DO HINTERLAND PARA O EXTERIOR

- Sectores tradicionais da economia
- Plataformas logísticas
- Sector Exportador
- Papel das Empresas e da Inovação Tecnológica

Conferências do Chiado

2. “Energy Game Changers”

APPLICATIONS

- . Gas is most versatile of fossil fuels
- . Used both in power generation and transportation
- . GTL may be competitive solution for transport in Medium Term

DECARBONIZATION OF ECONOMY

- . Gas is the least poluent of fossil fuels
- . May play key role in transition of energy paradigm

GAS DRIVERS

EFFECTS OF JAPAN NUCLEAR CRISIS

- . Decision of some countries to slowdown nuclear power (Germany, Italy, Japan)
- . Opens a more decisive role for Gas

Citizenship Issue

- Mobilization
- Change of behaviour
- Global economy vs local governance
- Multilateral institutions
- Restructuring of world economy

CLIMATIC CHANGE

- Is an issue of Security and survival

THE CLIMATIC THREAT

- Concentration of CO₂ in atmosphere before the Industrial Revolution : 280 ppm
- Current concentration : 400 ppm
- Projection at the end of the XXI Century: 560 ppm ("Business as usual")
- Increase of Earth temperature: 3 – 4° C
- Instability of life on Earth

Need of action focused on polluter centers:

- Power stations
- Electricity System
- Transport System

NEED BUILD a Low-Carbon ECONOMY

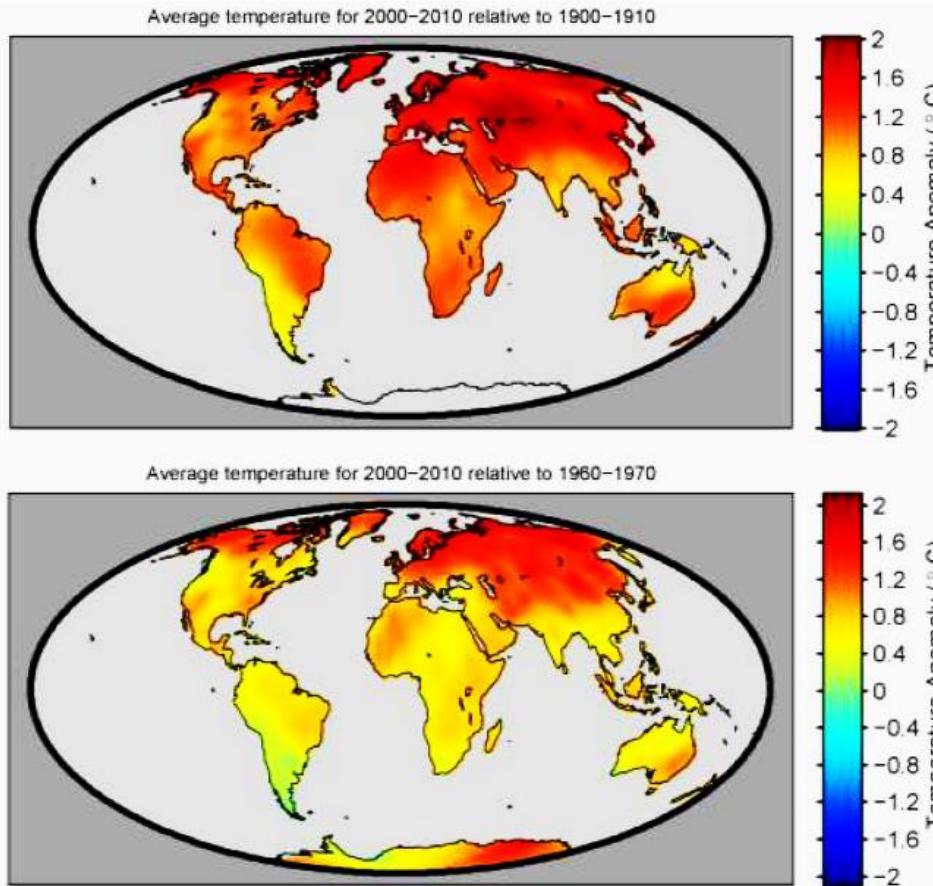

- Till today action led to poor results
- New Action Plans

Reduction of CO₂ Emissions
to be sucessful needs to be linked to MARKET mechanisms

BERKELEY EARTH TEMPERATURE STUDY

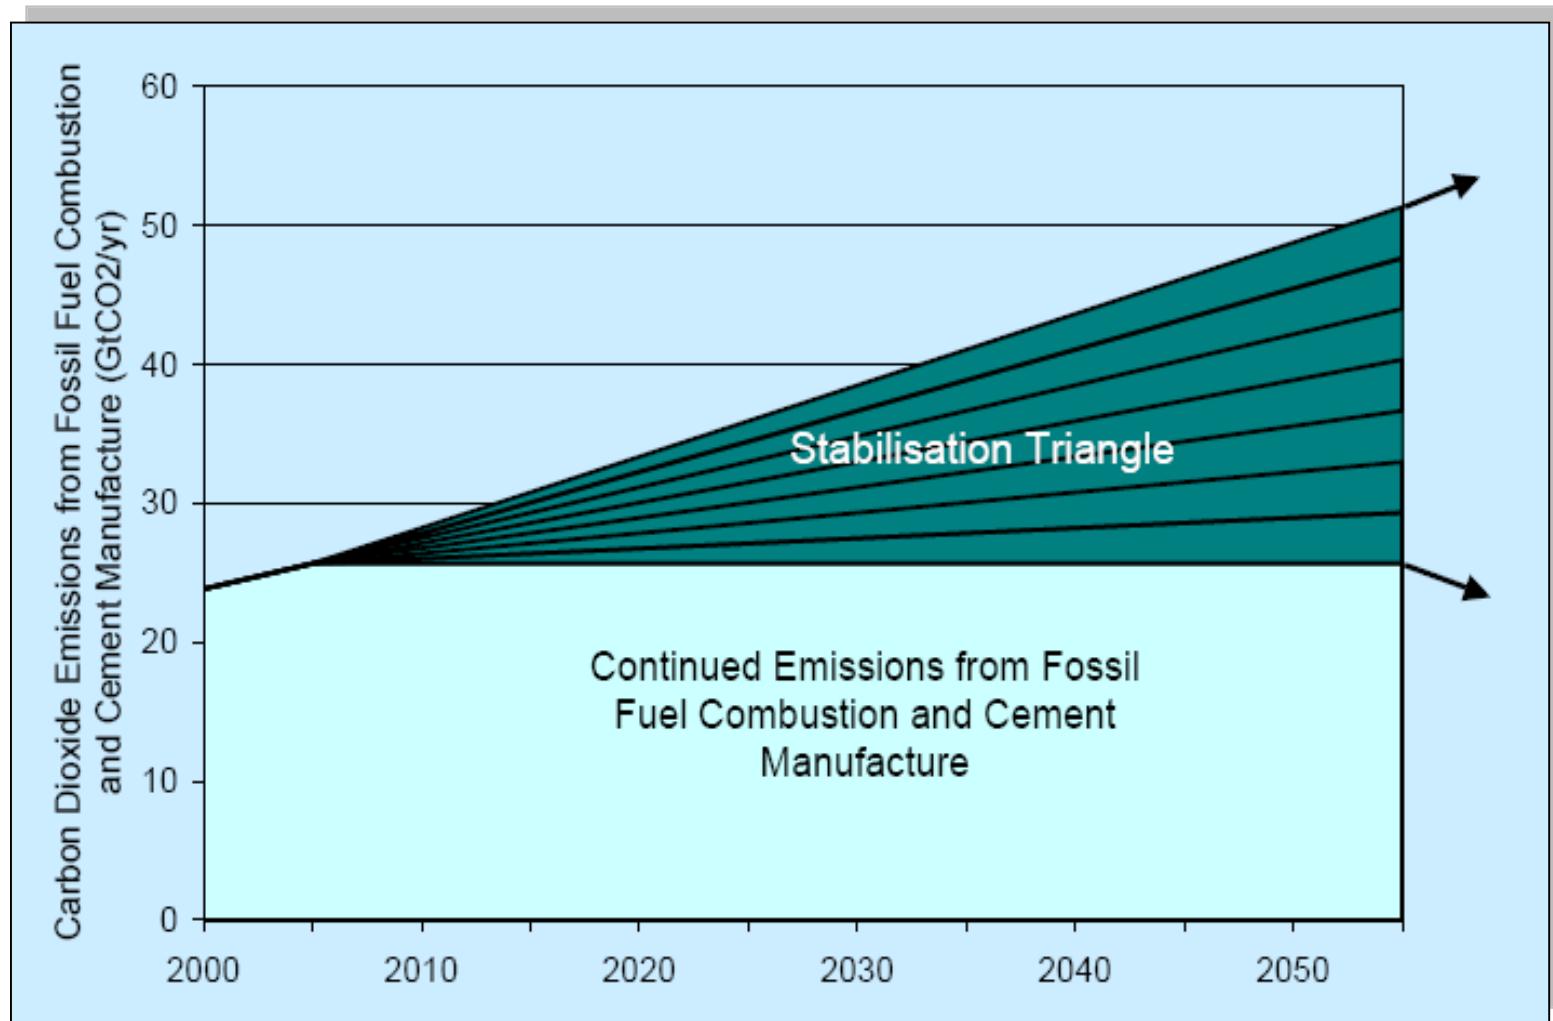

Prof. Richard A. Muller Team, November 2011

Maps showing the decadal average changes in land temperature field. In the upper plot, the comparison is drawn between the average temperature in 1900 to 1910 and the average temperature in 2000 to 2010. In the lower plot, the same comparison is made but using the interval 1960 to 1970 as the starting point. We observe warming over all continents with the greatest warming at high latitudes and the least warming in southern South America

FOUR MAJOR TRENDS CHANGING WORLD ENERGY MATRIX

- Growing electrification
- Decarbonization
- Localization
- Optimization

MAJOR ROLE of GAS

- Increasing share of world energy matrix
- Shale Gas revolution and magnitude of reserves
- Gas is most versatile of fossil fuels and least polluting
- Used both in power generation and transportation (GTL)
- “Gaseification” of economy

LOW CARBON SOLUTIONS

- Buildings
- Electric/Thermal Generation
- Transportation systems

GROWTH and SUSTAINABILITY

LNG and EFFECTS of JAPAN NUCLEAR CRISIS

- Decision of some countries to slowdown nuclear power (Germany, Italy, Japan)
- Open more decisive role for gas and specially LNG

Clean Technologies and Reduction of CO₂ Emissions

- Tolerance zero for Gas Flaring
- CO₂ sequestration and injection into oil reservoirs (win-win approach)
- Control/reduction of VOC emissions (surface facilities)
- Improve Market “design mechanisms” to promote energy efficiency

OIL & GAS INDUSTRY PUBLIC IMAGE

- Recent record of catastrophic accidents does not help
- Need to improve risk management to address public concerns
- Industry engaged in environmental and emissions cutting technologies
- Better communication with the public
- Better environmental regulations without jeopardizing expansion of required projects

3. A Transição Energética, o Papel do Gás Natural e Desafios para o Futuro

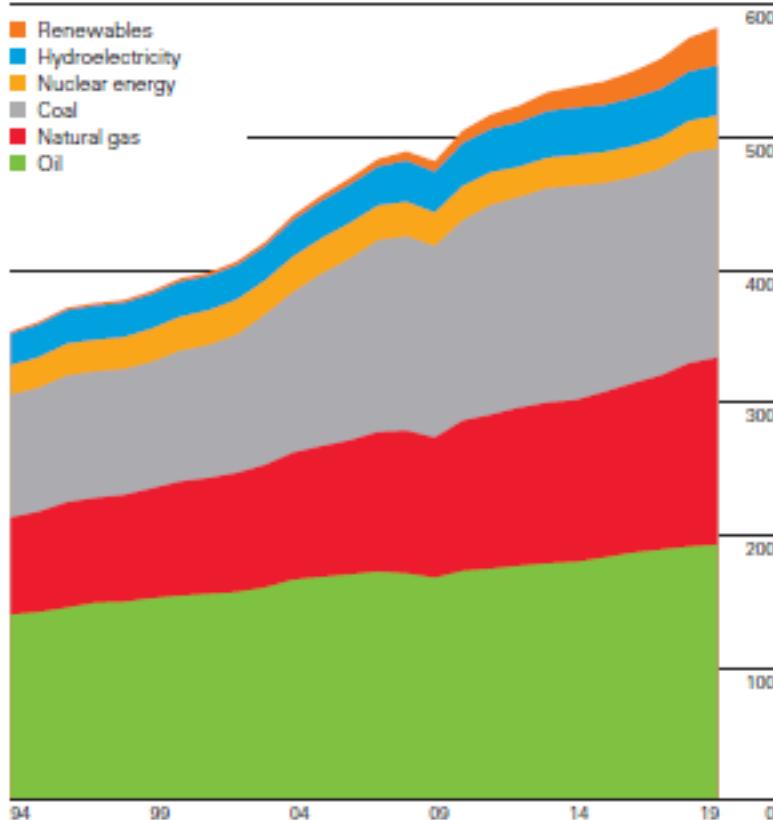

Primary Energy Consumption

World consumption

Exajoules

- Renewables
- Hydroelectricity
- Nuclear energy
- Coal
- Natural gas
- Oil

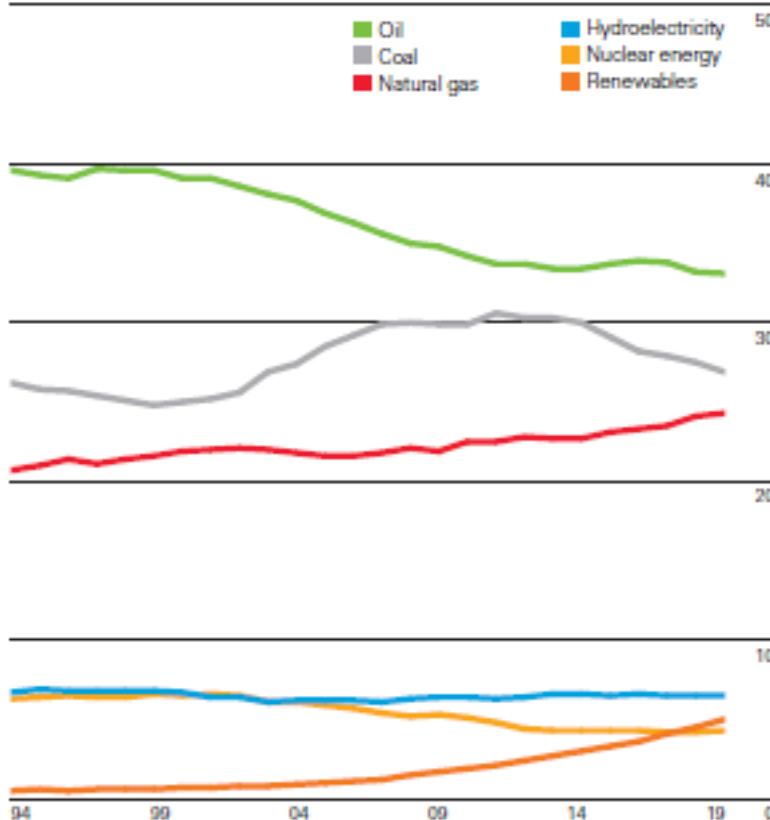

Primary energy consumption rose by 1.3% last year, less than half its rate in 2018 (2.8%). Growth was driven by renewables (3.2 EJ) and natural gas (2.8 EJ), which together contributed three quarters of the increase. All fuels grew at a slower rate than their 10-year averages, apart from nuclear, with coal consumption falling for the fourth time in six years (-0.9 EJ). By region, consumption fell in North America, Europe and CIS and growth was below average in South & Central America. In the other regions, growth was roughly in line with historical averages. China was the biggest individual driver of primary energy growth, accounting for more than three quarters of net global growth.

Shares of global primary energy

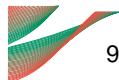

Percentage

- Oil
- Coal
- Natural gas
- Hydroelectricity
- Nuclear energy
- Renewables

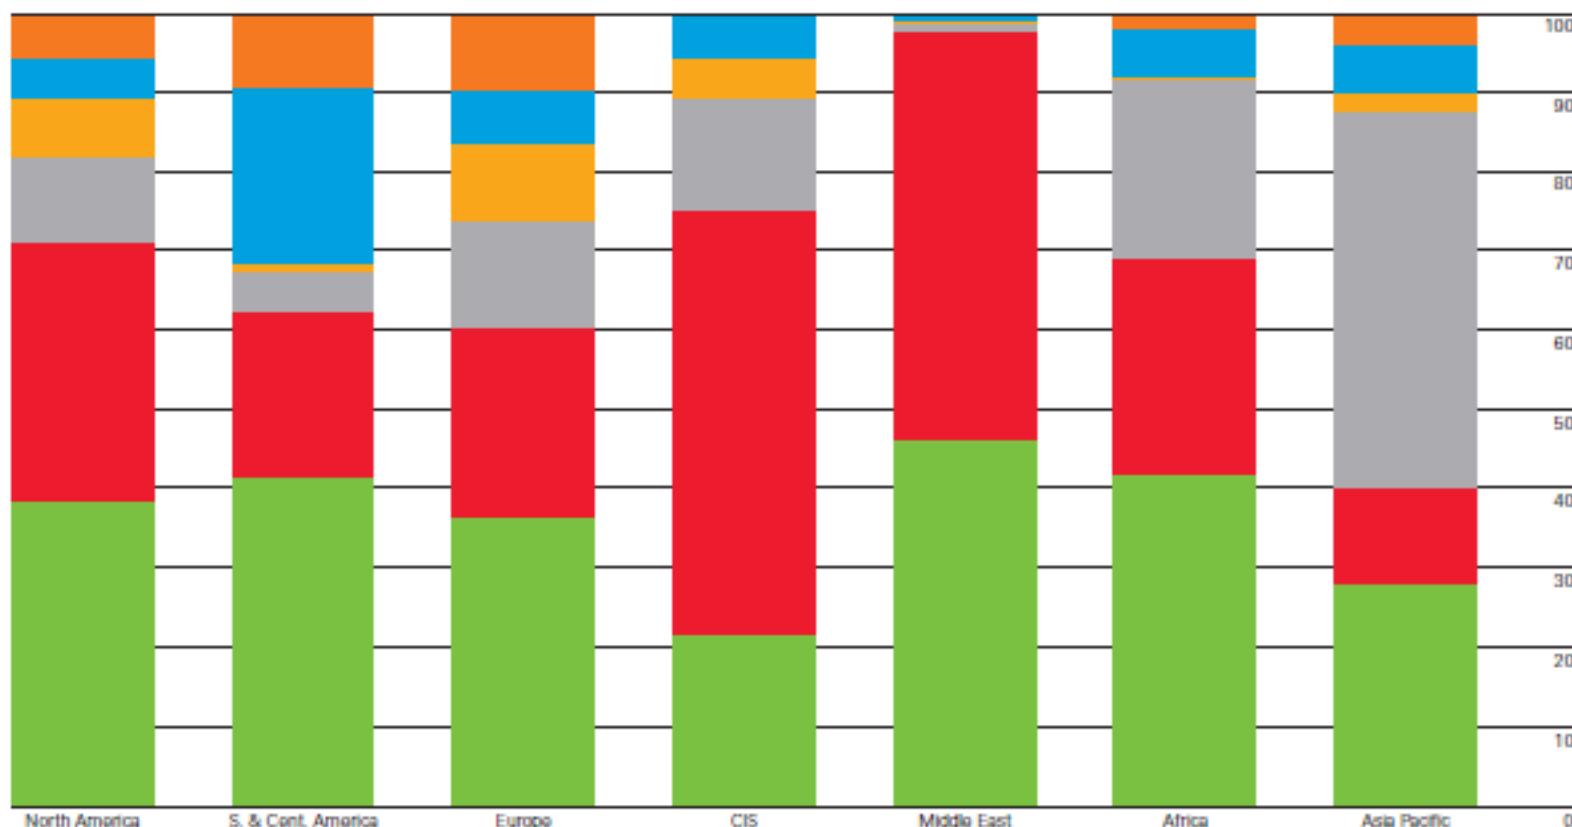

Oil continues to hold the largest share of the energy mix (33.1%). Coal is the second largest fuel but lost share in 2019 to account for 27.0%, its lowest level since 2003. The share of both natural gas and renewables rose to record highs of 24.2% and 5.0% respectively. Renewables has now overtaken nuclear which makes up only 4.3% of the energy mix. The share of hydroelectricity has been stable at around 6% for several years.

Source: bp Statistical Review of World Energy 2020

Regional Consumption Pattern

Regional consumption pattern 2019
Porcento

Oil remains the dominant fuel in Africa, Europe and the Americas, while natural gas dominates in CIS and the Middle East, accounting for more than half of the energy mix in both regions. Coal is the dominant fuel in the Asia Pacific region. In 2019 coal's share of primary energy fell to its lowest level in our data series in North America and Europe.

Proved Gas Reserves

Distribution of proved reserves in 1999, 2009 and 2019

Percentage

- Middle East
- CIS
- Asia Pacific
- North America
- Africa
- S. & Cent. America
- Europe

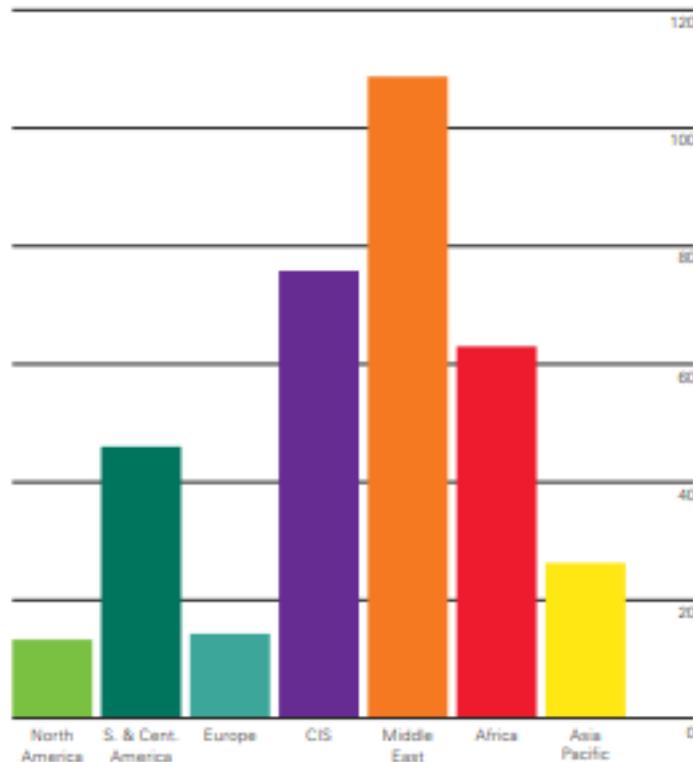

Source:bp Statistical Review of World Energy
2020

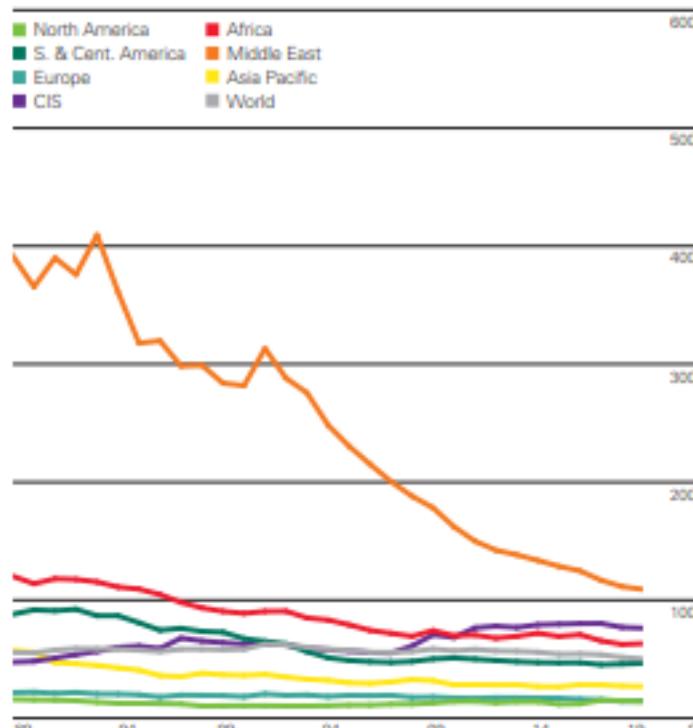

Reserves-to-production (R/P) ratios

Years

2019 by region

History

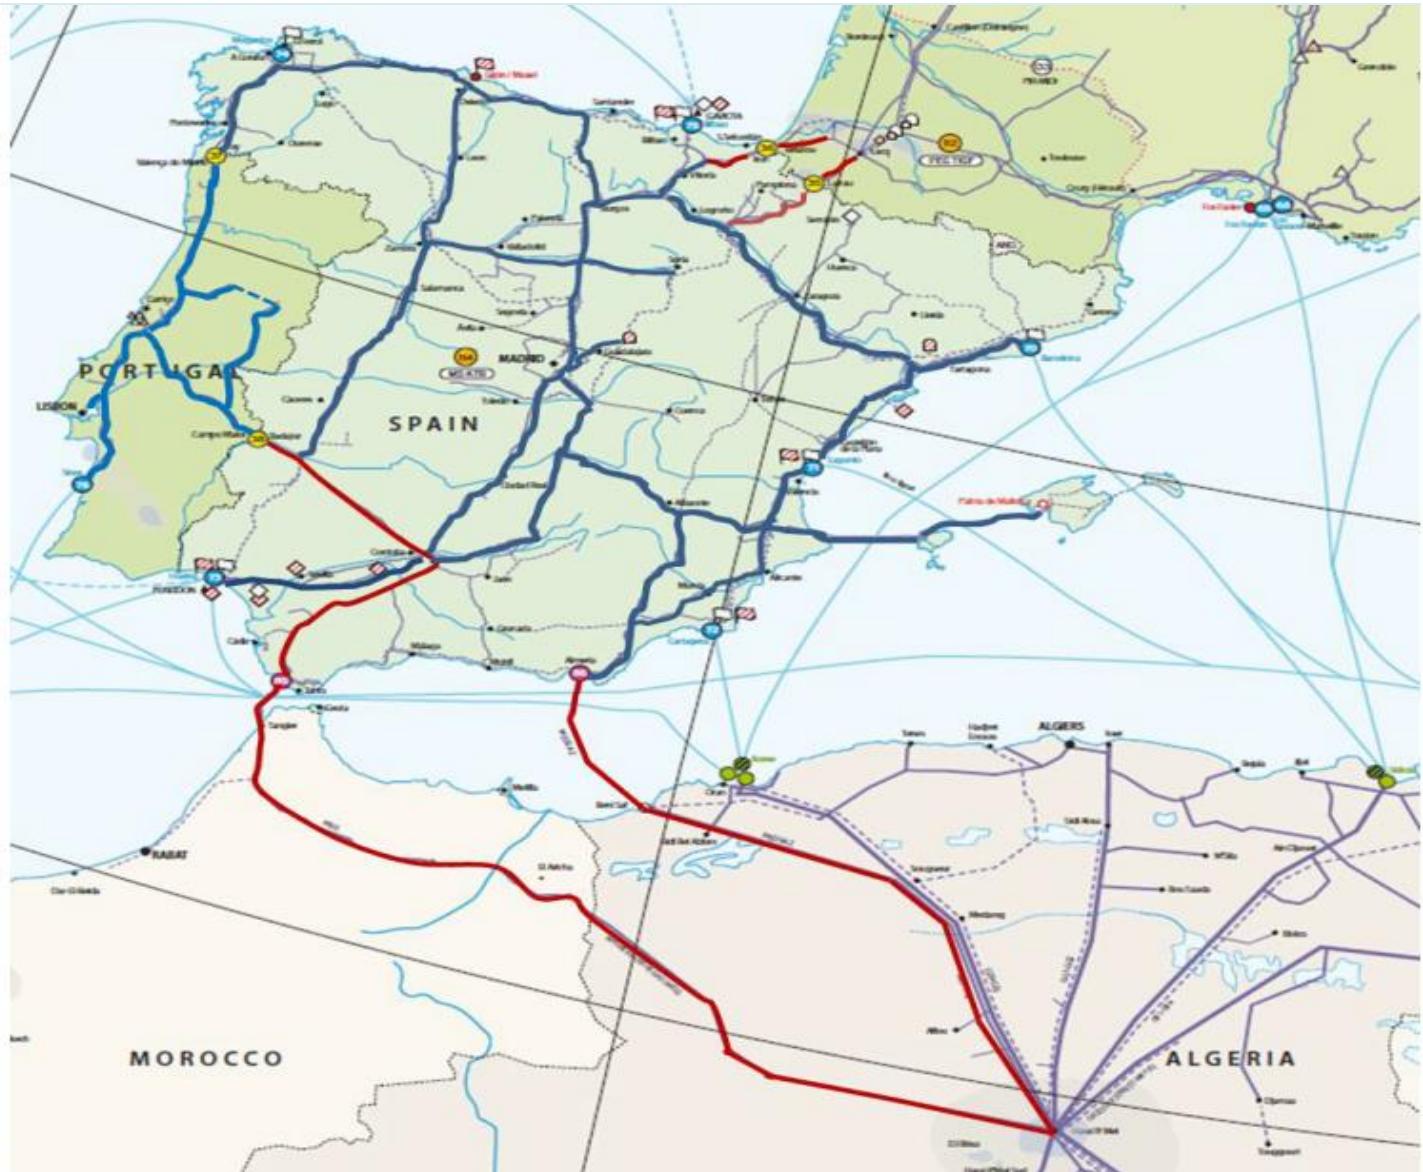

World proved gas reserves increased by 1.7 Tcm to 198.8 Tcm in 2019. China (2 Tcm) and Azerbaijan (0.7 Tcm) provided the largest increments, although this was partially offset by a 1.3 Tcm decline in Indonesian reserves. Russia (38 Tcm), Iran (32 Tcm) and Qatar (24.7 Tcm) are the countries with the largest reserves. The current global R/P ratio shows that gas reserves in 2019 accounted for 49.8 years of current production. The Middle East (108.7 years) and CIS (75.8 years) are the regions with the highest R/P ratio.

EUROPE

THREE SCENARIOS for the ENERGY TRANSITION

Evolving transition

In this scenario, government policies, technology and social preferences evolve in a manner and speed seen in the recent past. The growing world economy requires more energy but consumption increases less quickly than in the past.

Faster transition

This scenario sees carbon prices rising faster than in the evolving transition scenario, with other policy interventions encouraging more rapid energy efficiency gains and fuel switching.

Even faster transition

This scenario matches carbon emissions similar to the International Energy Agency's sustainable development scenario, which aims to limit the global temperature rise to well below 2°C.

Source: BP

PIVOTAL ROLE of GAS in the ENERGY MIX

- The less pollutant of fossil fuels
- Win / win with renewables

STRONG CLUSTER of RENEWABLE ENERGIES

- Wind onshore and offshore
- Solar
- More and more competitive prices

BIOFUELS/BIOENERGY

- Conversion of biomass into fuels
- Reverse of paradigm
- Waste to resources
- Cellulosic algae
- Not compete with food crops

OTHER POWERFUL SOLUTIONS

- Natural carbon sinks
- Reforestation/Agriculture soils
- Carbon capture and sequestration
- Direct air capture
- Carbon mineralization

MULTIDIMENSIONAL RESPONSE to ENERGY TRANSITION

HYDROGEN REVOLUTION

- Hydrogen from Natural Gas
- Competitive costs vs. water electrolysis
- Application in Fuel-cells and Batteries

ELECTRICAL MOBILITY

- Change of the transportation system
- EV's for cities
- Plug-in's
- Hybrid fleet

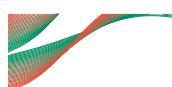

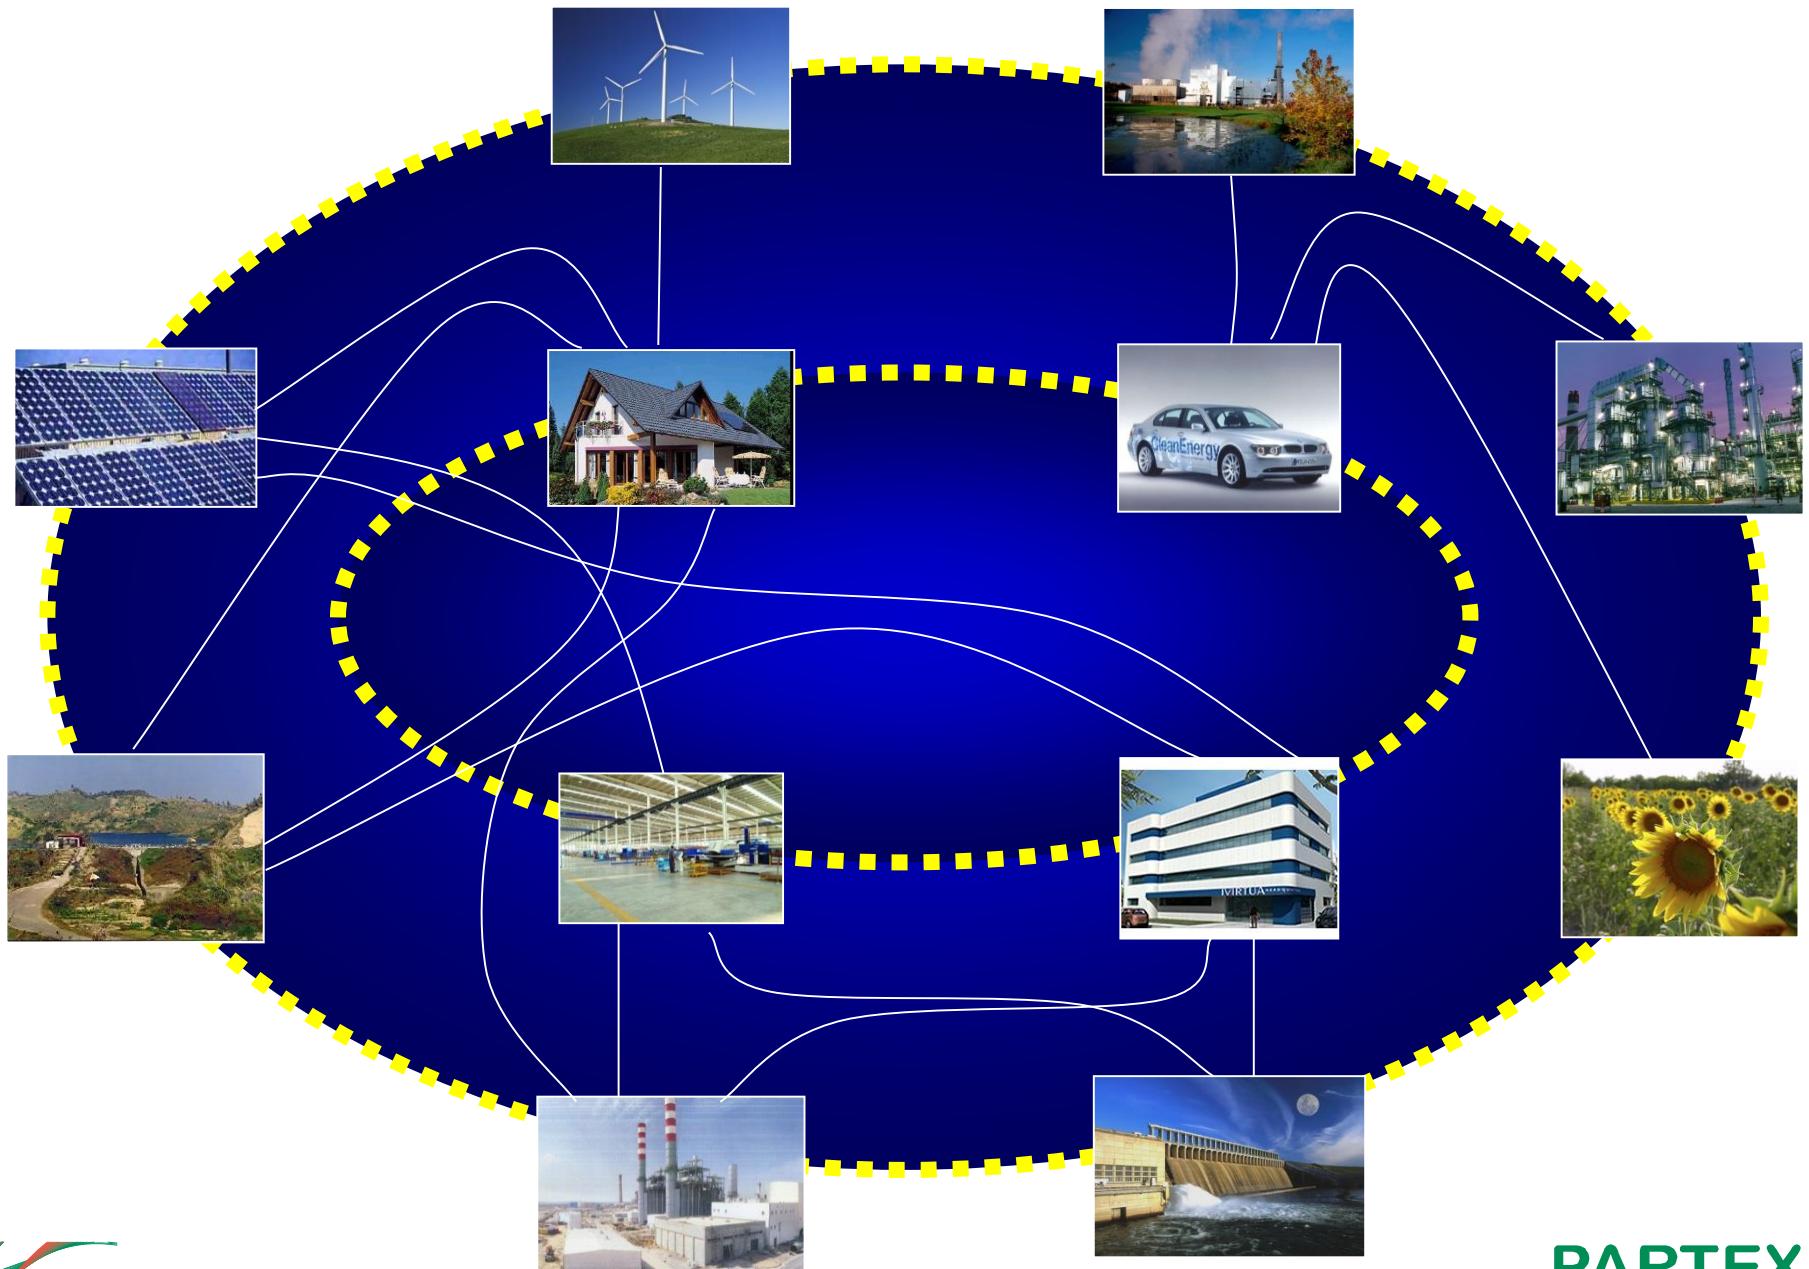

DIGITALIZATION and OPERATIONAL EFFICIENCY

- Internet of Energy
- Streamlining of operations
- AI and ML for BIG Data processing
- Reduce emissions
- Reduce waste

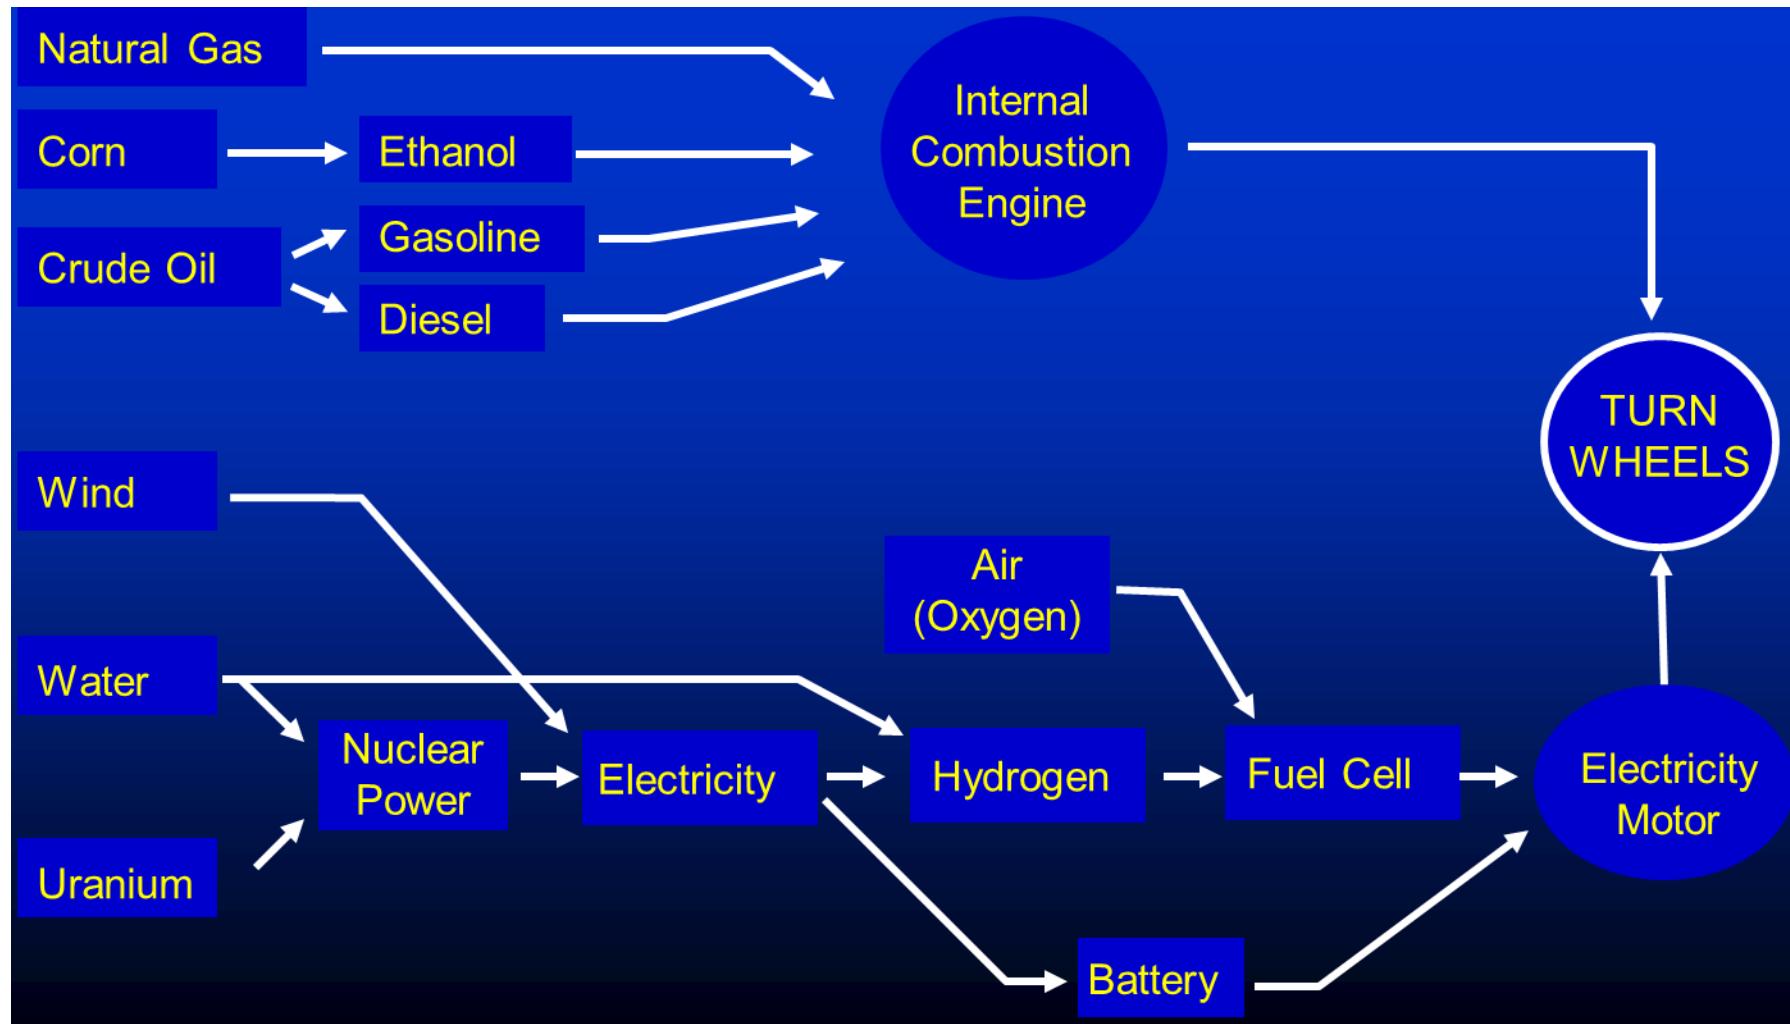

STORAGE

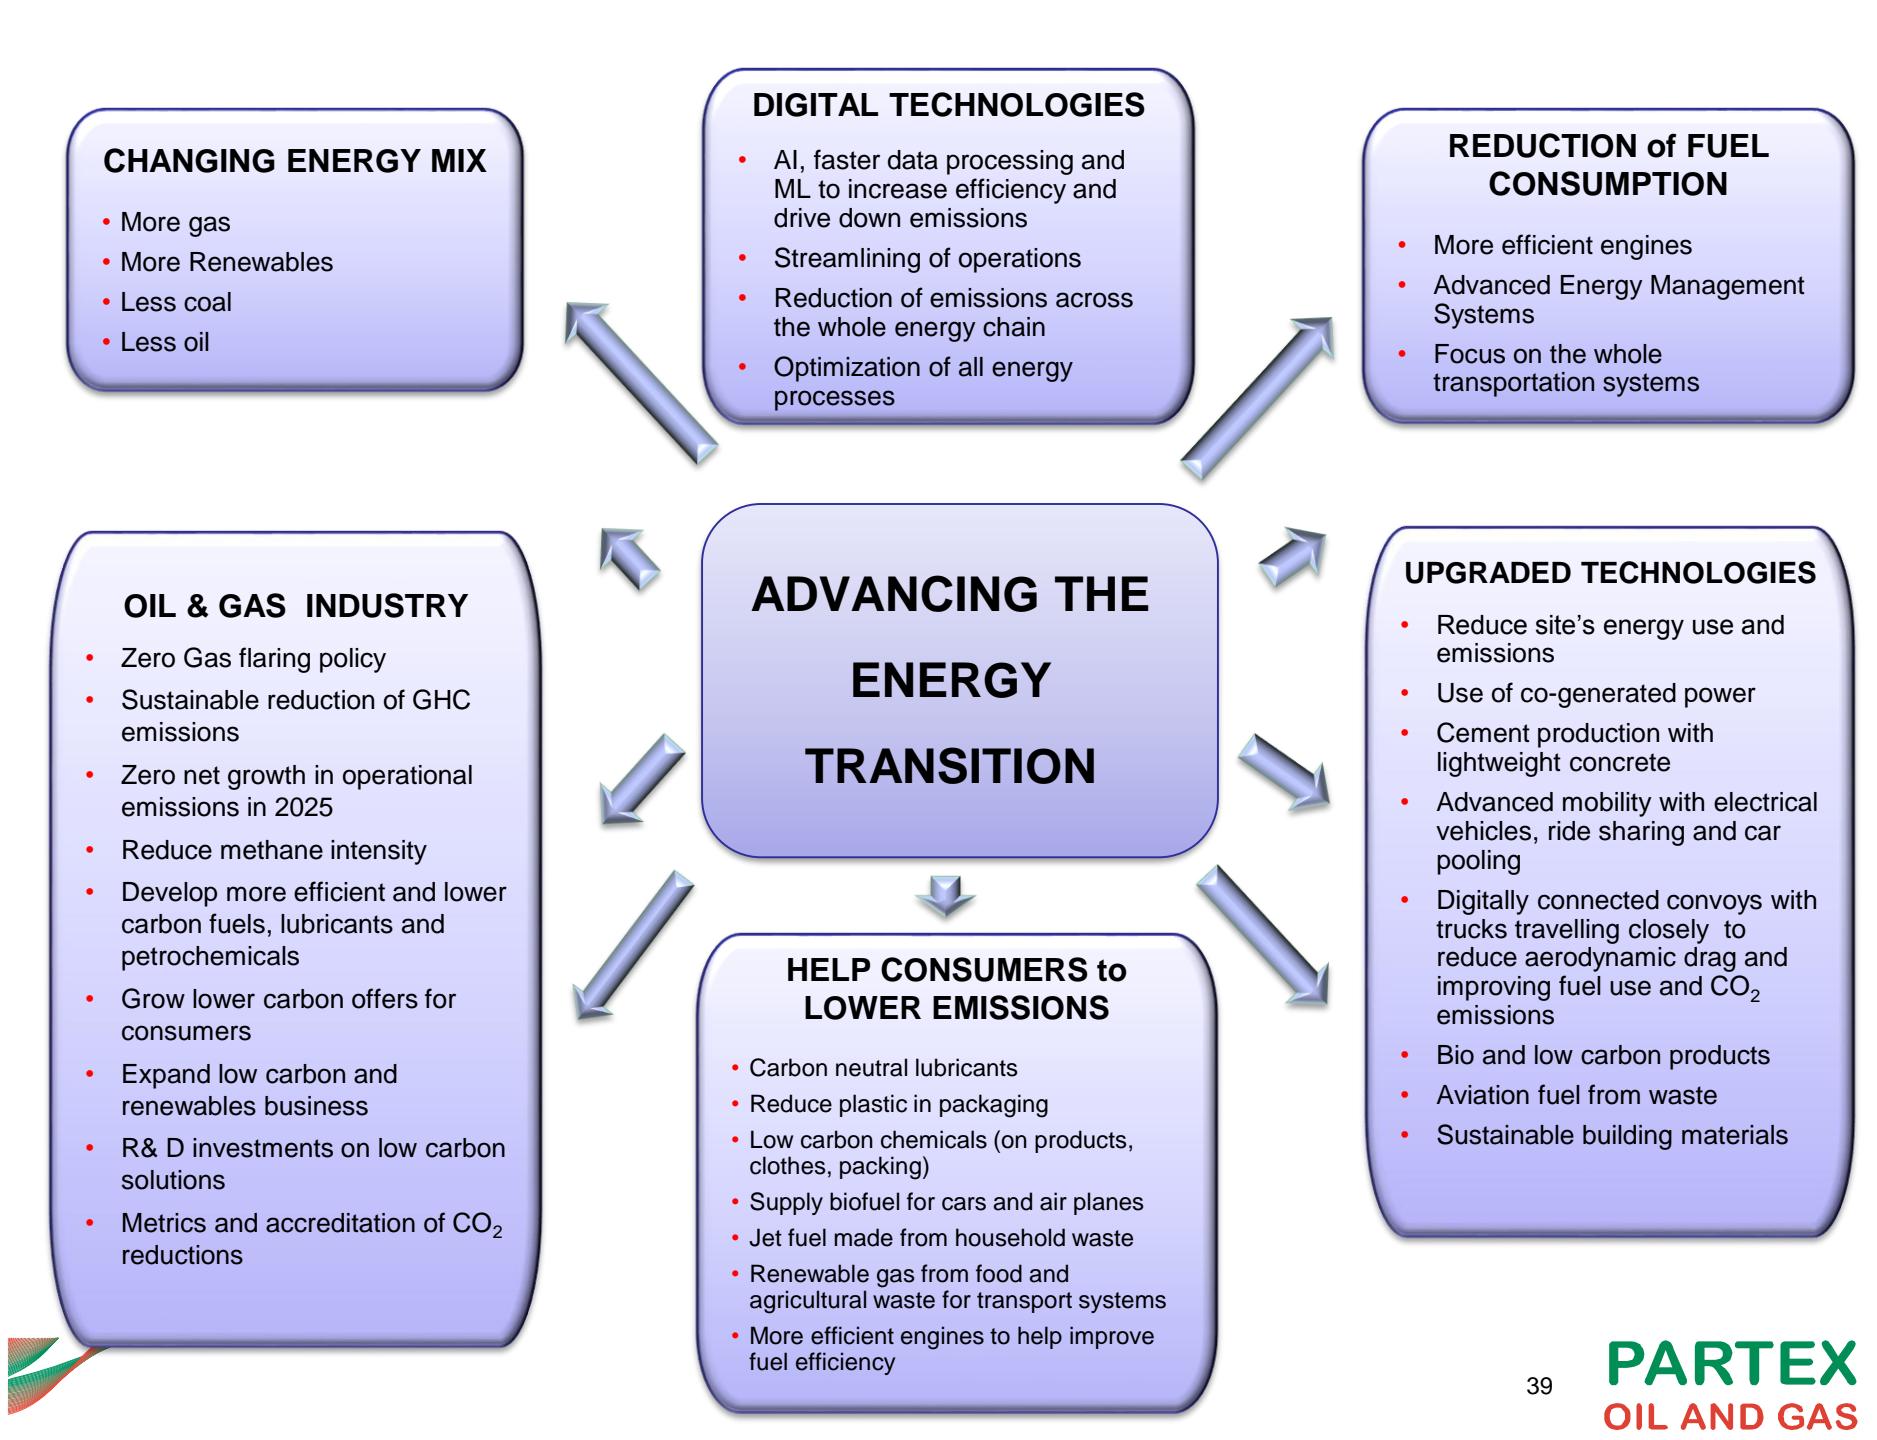

- Batteries at grid scale
- Invention of the Century
- Foster electrification of the economy
